

Cascade Technologies awarded ISO 9001:2008 Quality Management System Standard

4 March 2009

Stirling, United Kingdom – 4 March 2009 --

“The certification demonstrates Cascade’s commitment to putting customers’ satisfaction and product quality at the top of its agenda” explained Dr Iain Howieson, Managing Director at Cascade Technologies Ltd.

The company, at the forefront of new developments in gas analysis and detection, was awarded the Quality Standard in its 5th year, after initiating the complex process of ISO certification as a key business goal.

This commitment to robust business management and the implementation of product development processes has resulted in the award of significant contracts from global corporates in a variety of applications, from emissions monitoring to process optimization and defence.

The scope of the certification covers the design and manufacture of gas sensor products for all market sectors.

Notes to editors

- **Cascade Technologies** uses its revolutionary, patented core technology – based around the application of Quantum Cascade Lasers – to design, develop and supply innovative solutions for a wide range of global markets. These include the monitoring of greenhouse and general industrial emissions, hazardous gases, and explosives and drugs. Based at Stirling University Innovation Park, Cascade Technologies currently has world-class scientists and engineers working under development and supply agreements on several revolutionary products for key blue chip clients, whilst further bespoke product development, manufacturing, marketing and distribution agreements are being sought with customers worldwide. The company’s technology provides highly specific and sensitive measurement, whilst its portable size offers cost savings compared to competitive offerings. It is also immune to many outside influences that typically affect sensors of this type.
